

Installation Instructions: 4th Gen 4Runner Sunglasses Holder Switch Panel

1. Remove map light console from headliner
2. Remove the damper roller and coil spring from the outer side of the sunglasses door
3. Remove the sunglasses holder door from its pivots either by popping it out or drilling out its studs
4. Pop out the rubber bump stops in the open sunglasses holder area
5. Wire up the switches on the switch panel
6. Place the switch panel in the sunglasses holder, popping the rearward protrusions into the pivot holes one at a time
7. Use the supplied M3 Bolts (x2) and M3 nuts (x2) to bolt the frontward portion into the bump stop holes mentioned earlier
8. *For easier removal*, epoxy the nuts to the backside of the sunglasses housing. This should allow for the removal of the switch panel without taking out the whole map light console.
9. *If more clearance is needed for your wiring and connectors*, cut-away some of the upper housing (black plastic) with a rotary tool. Be mindful not to cut away the mounting holes.
